Kia ora Pavee,

Thank you for the diligence and for reaching out. This is greatly appreciated.

With support from MfE Targets and Budgets, we have looked at the table you provided.

From our quick scan, and analysis, the numbers you were looking at in the ERP2 Discussion Document are consistent “with additional measures” (WAM) data, but the Target 9 trajectory graph uses “with existing measures” (WEM) data.

We use WEM (without new policies) because that is the current state of play. The baseline with new policies (WAM) is still speculative and is likely to change before the final ERP2 document. When we report Target 9 going forwards, we will also use WEM and this will include new policies when they are implemented.

In summary, the Target 9 trajectory graph does not need to change.

Please call me if need be.

Ngā mihi nui,

Jeremy

Subject: RE: [Classification] Final Target 9 Report

Kia ora Lisa and Team,

I just spotted a discrepancy in EB2's trajectory between the final Target 9 Report against the ERP2 consultation doc ([link](#)). I think we should go with ERP2's values but please advise. Table below illustrates this.

	2026	2027	2028	2029	2030
Data from first draft	66.6	63.5	61.1	59.1	56.8
Final Target 9 Report	67	64	61	59	57
ERP2	66	63	60	58	56

Ngā mihi,

Pavee

Subject: [Classification] Final Target 9 Report

Kia ora Maari

Please find attached the Target 9 Report, which has been signed out by the Minister of Climate Change.

We note the following changes from the last version you saw:

- Change to the RAG status of EB2 (from feasible to probable, following discussions with MCC)
- We are using Pavee's second option for the template (email dated 12 July)
- We have incorporated most of your feedback, including to trim down the text on Page 2. We note where we differ slightly is on the 'actuals/inventory data' and 'projections' aspect of the main chart, which I discussed earlier in the week with John. The "Historical" includes inventory *and* adjusted baseline data (we can explain this more in the technical annex). This includes inventory data up to 2021 and adjusted baseline data for 2022 (consistent with what is in the ERP2 discussion document that went live today and which factors in updates because of Stats NZ livestock and fertiliser revisions). For 2023, these numbers are also consistent with the ERP2 discussion document and are derived from the ENZ model.

Thanks for your support and feedback in preparing this initial report and we note that work is ongoing with communications team to support the release of the consolidated report.

Please do let us know if any further queries or feedback.

Many thanks,
Lisa

Lisa Daniell [she/her]
