Rangitoopuni Developments Limited Partnership C/- Avant Property Development Ltd Level 2 7 Falcon Street Parnell Auckland 1052

Attn: Shane Kelly

Dear Shane

Desktop Contamination Assessment – Rangitōpuni Riverhead (Lots 1 and 2), Forestry Road, Riverhead

(Our Reference: 020190.001.001_01)

1 Introduction

ENGEO Ltd was requested by Rangitoopuni Developments Limited Partnership to undertake a desktop contamination assessment at Rangitōpuni Riverhead (Lots 1 & 2), Forestry Road, Riverhead (within Riverhead Forest; site boundary shown on Figure 1). This work has been carried out in accordance with our signed agreement, dated 23 April 2024.

We understand that Rangitoopuni Developments Limited Partnership propose to subdivide Lot 1 for residential redevelopment; Lot 2 will remain one lot and be developed into a retirement village. The purpose of the assessment was to assess information relating to current and historical potential contamination sources at the site. Our scope of works comprised:

- A review of historical aerial photographs;
- Review of Auckland Council's response to a Site Contamination Enquiry; and
- Review of photographs from ENGEO's previous visits to the site (as part of concurrent geotechnical works).

This investigation was undertaken in general accordance with the Ministry for the Environment's (MfE) Contaminated Land Management Guidelines (CLMG) No. 1: Reporting on Contaminated Sites in New Zealand (MfE, 2021a). The investigation was supervised, and the report reviewed and approved by a suitably qualified and experienced contaminated land practitioner in accordance with national environmental regulations for soil contamination.

2 Site Description

The site is located within Riverhead Forest, north of Riverhead township, Auckland. No buildings are visible on the site in recent aerial photographs, however various forestry roads are present, which are mapped as Barlow Road, Link Road, Forestry Road, Deacon Road, Blake Road and Cobblers Lane, in addition to various unnamed roads.

Site information is summarised in Table 1 – information was obtained from Auckland Council Geomaps, unless otherwise indicated.

Table 1: Site Information

ltem	Description
Site Address	Lot 1: Old North Road, Huapai 0892 Lot 2: Forestry Road, Riverhead 0892
Legal Description	Lot 1: Lot 1 DP 590677 Lot 2: Lot 2 DP 590677
Current Land Use	Forestry
Proposed Land Use	Residential and Retirement Village
Site Area	Lot 1: 222.7519 ha Lot 2: 173.6192 ha Total: 396.3711 ha
Territorial Authority	Auckland Council
Zoning	Rural – Countryside Living Zone
Geology	The site is mapped by GNS (Heron, 2001) as overlying East Coast Bays Formation of the Waitemata Group, generally comprising "alternating sandstone and mudstone with variable volcanic content and interbedded volcaniclastic grits." ENGEO has previously completed geotechnical investigations at the site (ENGEO, 2024), which identified East Coast Bays Formation and Albany Conglomerate deposits, generally consistent with published mapping.
Topography	The site is undulating, varying in elevation between about 100 m and 25 m above mean sea level. Mapped contours indicate steep slopes in the southeast of Lot 2 sloping towards Rangitōpuni Stream, and slopes dipping towards the central boundary between Lots 1 and 2.

ltem	Description
Hydrology	A permanent stream (unnamed) is mapped flowing southward, generally along the boundary between Lots 1 and 2. There are also a number of tributaries flowing downward towards this stream.
	A permanent stream (unnamed) and a number of tributaries are also mapped at the western part of Lot 1, flowing west.
	Various overland flow paths are also present through the site, which generally indicate surface water flows as follows:
	 At the western part of the site, water likely flows west towards Ararimu Stream;
	 At the central and northern parts of the site, water likely flows south along the unnamed stream, before turning east south of the site to Rangitōpuni Stream.
	 At the southeast part of the site, water likely flows southeast to the same unnamed stream, nearer to the discharge point with Rangitōpuni Stream.
	The site is mapped as overlying a High-Use Stream Management Area Overlay.
Hydrogeology	Based on surface contours and nearby surface water bodies, shallow groundwater flow direction is expected to vary across the site, but generally consistent with overland flows.
	ENGEO's concurrent geotechnical works (ENGEO, 2024) identified standing groundwater between 0.2 m and 3.6 m bgl, however noted that groundwater depth was likely to vary (near the surface in low-lying areas and deeper along ridgelines).
	The site is mapped as overlying a High-Use Aquifer Management Area Overlay – Kumeu Waitemata Aquifer.

3 Site History

3.1 Te Ara Encyclopedia of New Zealand

Te Ara Encyclopedia of New Zealand (McClure, 2024) includes a description of Riverhead within a historical summary of Auckland. It notes that "Riverhead State Forest was planted on 5,000 ha of poor gum land from 1929 to 1933. Owned today by Carter Holt Harvey, the forest is popular for its biking trails."

Based on this and other online sources, we understand that the site was historically used for gum digging of kauri, before being converted to forestry in the 1920s – 1930s.

3.2 Historical Aerial Photographs

Aerial photographs dating from 1940 to 2024 have been reviewed and selected photographs are included and discussed in Attachment 1. The aerials were sourced from Auckland Council GeoMaps, Retrolens, Google Earth Pro and Nearmaps New Zealand.

The aerial photographs indicate that the site has been used exclusively for forestry since at least 1940. No significant changes are visible on the site throughout this period, except for periodic clearing and planting of trees and occasional re-routing of the forestry roads.

3.3 Auckland Council Response to a Site Contamination Enquiry

ENGEO was provided by the client with Auckland Council's response to a Site Contamination Enquiry, dated 3 February 2023. The enquiry covered a large area comprising the majority of Riverhead Forest, which includes the present site. The response is included as Attachment 2.

The following information is relevant to this investigation:

- Auckland Council concluded that there is no contamination information within Council records for the site.
- A Preliminary Site Investigation (PSI) was prepared by Cato Bolam (2014) which did not identify any potential contaminating activities (discussed further below).

In preparing the response, the former Auckland Regional Council and current databases were searched for records of verified and non-verified HAIL sites, closed landfills, bores, air discharge, industrial and trade process consents, contaminated site discharge consents, and environmental assessments within approximately 200 metres of the site.

Relevant findings in relation to this assessment are as follows:

- An incident was listed in 2009 as "Riverhead Forest drum leaking oil". Based on the map, this is inferred to be in the central part of Lot 2. The incident notes 'Nil' impact and volume identified. No other relevant incidents were noted. Forestry manager Sam Middlemass, who has been working on-site since the year 2000 stated to ENGEO that this incident was not included in his records. Further, according to Mr Middlemass, the only drums present on-site during forestry activities are 1,000 L diesel tanks used for refueling machinery. These are double-lined and mounted on bunded sleds which are stored in locked shipping containers overnight. As the discharge was not found by the council monitoring officer on the day it was reported, it is considered likely that the leaking drums discharge volume was relatively minor.
- No HAIL activities are listed on the site. Various HAIL activities are listed relating to the industrial
 area south of the site. Given that these are downslope from the site and activities near the
 boundary appear to be limited, impacts to the site from these activities are considered unlikely.
- Various bore records are listed for domestic supply, stock supply or irrigation, including two
 bores north of the site within Riverhead Forest. Given that these entries date up to 2015, we
 consider that there is reasonable potential for potable water supplies to be present near the
 site.
- Consents are listed within the site boundary for:
 - Exotic Tree Harvesting (expired in 1993);
 - o To take water from a stream for industrial use:

- To discharge treated sewage effluent from a treatment plant by spray irrigation (within 600 m of map reference; granted 1987, expired 1996 and listed as 'not replaced'); and
- Overland flows of potable water from the Riverhead Reservoir.
- Various consents are listed around the site for water supplies, trade waste, discharges from a cleanfill and orcharding.

ENGEO was also provided with the PSI referenced within Auckland Council's response (Cato Bolam, 2014). The investigation covered an area of about 20 hectares within Riverhead Forest about 1.5 km west of the present site, at which a cleanfill was proposed. While the site area does not overlap, we consider that it provides relevant information regarding site-wide activities within the forest. Cato Bolam concluded that there are no current or historical potentially contaminating activities at the site.

4 Potential HAIL Activities

If current or historical activities included on the Hazardous Activities and Industries List (HAIL; MfE, 2021b) are identified at a site the NESCS may apply. An intrusive contaminated land investigation (DSI) is then required prior to redevelopment to determine the actual impact of the HAIL activities on the ground conditions at the site, and to assess resource consent requirements for the redevelopment works under the NESCS.

Auckland Council's records of consents indicated that treated wastewater was likely sprayed in Riverhead Forest sometime between 1987 and 1996. While the consent location is within the site boundary, the precise location or nature of this spraying is not known. We do not consider this constitutes HAIL Activity G5: Waste disposal to land (excluding where biosolids have been used as soil conditioners) given that treated wastewater from the site is unlikely to contain significant amounts of contaminants. This is in line with recent MfE guidance on application of HAIL ID G5 (MfE, 2023), which suggests that this HAIL activity primarily relates to untreated wastewater or wastewater from industrial sources.

Based on the information reviewed as part of this investigation, we have not identified a HAIL activity at the site.

5 Regulatory Context

In Auckland, management of potentially contaminated soils is covered by the following regulations:

- Resource Management (National Environmental Standard for Assessing and Managing Contaminants in Soil to Protect Human Health) Regulations 2011 (NESCS, 2011).
- Auckland Unitary Plan, operative in part 15 November 2016 (the AUP; Auckland Council, 2016).

5.1 The NESCS

The intent of the NESCS is to protect the human health of the site's end users, the site redevelopment workers and the surrounding populations.

Given that a HAIL activity has not been identified at the site, the site does not meet the definition of 'land covered' under Regulation 5(7).

5.2 Auckland Unitary Plan

The AUP sets out consent requirements for dealing with discharges to the environment from contaminated land (including passive discharges on an ongoing basis).

Given that no potentially contaminating activities have been identified at the site, we consider it unlikely that the site meets the definition of 'land containing elevated levels of contaminants'. Therefore, the contaminated land provisions of the AUP (Section E30) are not considered applicable to the site.

6 Conclusions

The investigation has not identified a potentially contaminating activity at the site. The proposed subdivision is therefore not subject to the NESCS or the contaminated land provisions of the AUP.

No further investigation work is considered necessary to support the consent application for the planned redevelopment.

If soil disposal is required as part of the redevelopment works, soil testing may be required to assess whether the soil meets the Auckland Council definition of cleanfill.

If unexpected contamination is discovered during redevelopment, Auckland Council should be notified and the provisions of Rules E11 and E12 should be followed.

7 Limitations

- i. We have prepared this report in accordance with the brief as provided. This report has been prepared for the use of our client, Rangitoopuni Developments Limited Partnership, their professional advisers and the relevant Territorial Authorities in relation to the specified project brief described in this report. No liability is accepted for the use of any part of the report for any other purpose or by any other person or entity.
- ii. The recommendations in this report are based on the ground conditions indicated from published sources, site assessments and subsurface investigations described in this report based on accepted normal methods of site investigations. Only a limited amount of information has been collected to meet the specific financial and technical requirements of the Client's brief and this report does not purport to completely describe all the site characteristics and properties. The nature and continuity of the ground between test locations has been inferred using experience and judgement and it should be appreciated that actual conditions could vary from the assumed model.
- iii. Subsurface conditions relevant to construction works should be assessed by contractors who can make their own interpretation of the factual data provided. They should perform any additional tests as necessary for their own purposes.
- iv. This Limitation should be read in conjunction with the Engineering NZ / ACENZ Standard Terms of Engagement.
- v. This report is not to be reproduced either wholly or in part without our prior written permission.

We trust that this information meets your current requirements. Please do not hesitate to contact the undersigned on (09) 972 2205 if you require any further information.

NESCS, 2011. The Resource Management (National Environmental Standard for Assessing and Managing Contaminants in Soil to Protect Human Health) Regulations (2011).

1940 (Retrolens NZ). Site boundary indicative only.

The site is under forestry use, with some forestry roads throughout. The surrounding area is primarily forestry (northwest and southwest) or agricultural (southeast).

1960 (Retrolens NZ). Site boundary indicative only. No significant changes to the site since 1940.

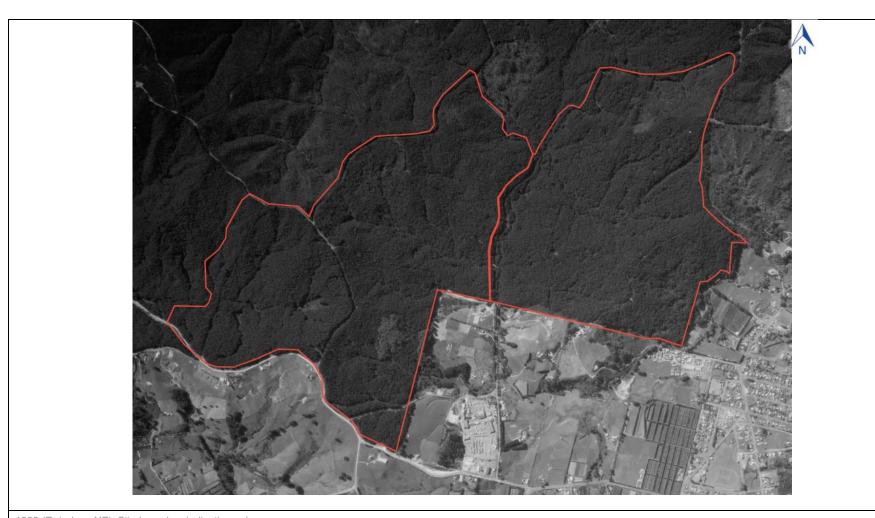

1978 (Retrolens NZ) . Site boundary indicative only.

No significant changes to the site since 1978. There is increased industrial development to the south, and a forestry area to the southwest now appears to be agricultural.

1988 (Retrolens NZ). Site boundary indicative only.

No signfiicant changes to the site or surrounding area since 1978.

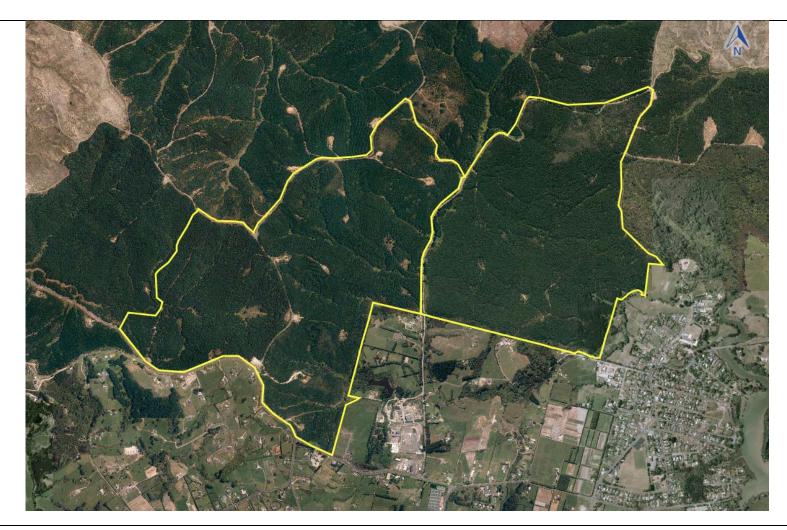

1996 (Auckland Council Geomaps). Site boundary as indicated by Auckland Council.

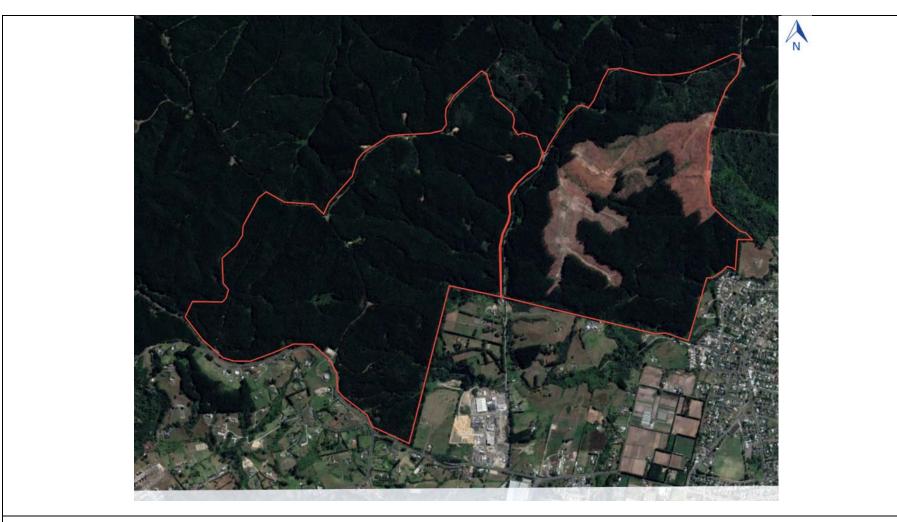

No signflicant changes to the site or surrounding area since 1978.

2011 (Auckland Council Geomaps). Site boundary as indicated by Auckland Council. No signflicant changes to the site or surrounding area since 1996.

2019 (Google Earth). Site boundary indicative only.

A forested area at the eastern part of Lot 2 has been cleared. No other significant changes since 2011.

2024 (Nearmaps NZ). Site boundary indicative only.

The majority of Lot 1 has been cleared. No other significant changes since 2019.

Attention: Tom Morgan

Dear Tom

Site Contamination Enquiry - Forestry Road, Riverhead

This letter is in response to your enquiry requesting available site contamination information within Auckland Council records for the above site. Please note this report does not constitute a site investigation report; such reports are required to be prepared by a (third-party) Suitably Qualified and Experienced Practitioner.

The following details are based on information available to the Contamination, Air & Noise Team in the Resource Consent Department. The details provided may be from former regional council information, as well as property information held by the former district/city councils. For completeness the relevant property file should also be requested to obtain all historical records and reports via 09 3010101 or online at:

 $\underline{https://www.aucklandcouncil.govt.nz/buying-property/order-property-report/Pages/order-property-file.aspx.}$

1. Hazardous Activities and Industries List (HAIL) Information

This list published by the Ministry for the Environment (MfE) comprises activities and industries that are considered likely to cause land contamination as a result of hazardous substance use, storage, and/or disposal.

There is no contamination information within Council records for the site. A Preliminary Site Investigation undertaken on a portion of the site dated December 2014 did not identify any potential contaminating activities.

Please note:

- If you are demolishing any building that may have asbestos containing materials (ACM) in it, you have obligations under the Health and Safety at Work (Asbestos) Regulations 2016 for the management and removal of asbestos, including the need to engage a Competent Asbestos Surveyor to confirm the presence or absence of any ACM.
- Paints used on external parts of properties up until the mid-1970's routinely contained lead, a
 poison and a persistent environmental pollutant. You are advised to ensure that soils affected
 by old, peeling or flaking paint are assessed in relation to the proposed use of the property,
 including high risk use by young children.

2. Consents and Incidents Information (200m radius of the selected site)

The Council database was searched for records of the following activities within approximately 200 metres of the site:

- Pollution Incidents (including air discharges, oil or diesel spills)
- Bores
- Contaminated site and air discharges, and industrial trade process consents
- Closed Landfills
- Air quality permitted activities
- Identified HAIL activities

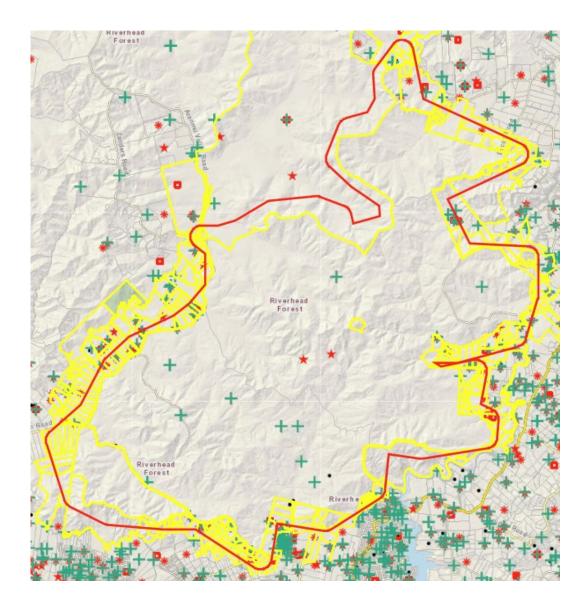

Figure 1: Selected Consents, Incidents and HAIL activities within approximately 200m of the subject site

Legend:

Relevant details of any pollution incidents and consents and HAIL activities are appended to this letter (Attachment A). Please refer to the column titled 'Property Address' on the spreadsheet to aid in identifying corresponding data on the map.

For any identified HAIL sites, please refer to the tab "HAIL activities" for more information (Column C and D include HAIL activity details where these are available).

Please note:

The HAIL activity hatching in Figure 1 only reflects whether a site has been identified as a HAIL site (both verified and non-verified) by the Council and the type of HAIL associated with the site. This does not confirm whether the site has been formally investigated or the contamination status of the property (e.g. contaminated, remediated etc.). Additionally, due to limitations within Council's records, the specific HAIL activity is not included in the data for all properties. For further information on any of these known HAIL sites, a subsequent site contamination enquiry can be lodged for the specific property (up to 5 adjacent properties can be covered in one request).

While the Auckland Council has carried out the above search using its best practical endeavours, it does not warrant its completeness or accuracy and disclaims any responsibility or liability in respect of the information. If you or any other person wishes to act or to rely on this information, or make any financial commitment based upon it, it is recommended that you seek appropriate technical and/or professional advice.

If you wish to clarify anything in this letter that relates to this site, please contact contaminatedsites@aucklandcouncil.govt.nz. Any follow up requests for information on other sites must go through the online order process.

Should you wish to request any of the files referenced above and/or listed in the attached spreadsheet for viewing, please contact the Auckland Council Call Centre on 301 0101 and note you are requesting former Auckland Regional Council records (the records department requires three working days' notice to ensure the files will be available).

Please note Auckland Council cost recovers officer's time for all site enquiries. As such an invoice for for the time involved in this enquiry will follow shortly.

Yours Sincerely,

Contamination, Air and Noise Team Specialist Unit | Resource Consents Auckland Council
