TO WHOM IT MAY CONCERN

Eastern Porirua's local wastewater network is made up of a number of individual wastewater catchments that drain via gravity to a trunk network primarily located within Bothamley Park. The trunk network traverses land primarily owned by Porirua City Council, but also land held in Carrus' ownership (being Lot 277 DP 512438, Lot 273 DP 498135).

The existing network in eastern Porirua has significant condition and performance issues and does not meet current or future aspirational level of service targets, with high existing I&I (Inflow and Infiltration). Much of the asset is end of life and the existing trunk main condition in Bothamley Park has regular failures with wastewater contamination of Bothamley Park and Kenepuru Stream, which is a significant environmental and community issue. The wastewater trunk main in Bothamley Park requires replacement.

Carrus have been advised that these essential infrastructure upgrade works are the subject of a joint application (by Porirua City Council and Kāinga Ora) to the Minister for the Environment for referral to be considered under the COVID-19 Recovery (Fast-track Consenting) Act. Carrus understands that this alternative consenting framework will expedite the consenting process for these necessary works and enable construction on the infrastructure works to commence by late 2020/early 2021.

Carrus support the joint application being made to the Minister for the Environment to utilise the alternative process enabled by the COVID-19 Recovery (Fast-track Consenting) Act. Carrus also consent to physical works associated with this application being undertaken on land held in Lot 277 DP 512438 and Lot 273 DP 498135.

Yours faithfully  
CARRUS LIMITED
