

## Site Waste Management and Minimisation Statement

19.10.2021

Re: 45 Waimarie Street, 43a Waimarie Street, 819 Ridell Road

Attn: Feitong Chen  
Civix

Green Gorilla has been engaged to provide expert advice on operational waste and recycling for the above development.

### Green Gorilla Profile and Relevant Expertise:

Founded in 2010, the focus of Green Gorilla is to develop and provide sustainable waste and recycling solutions that maximise recovery and re-use, so waste can be diverted from landfill wherever possible. With a strong emphasis on sustainable business practices, we provide clients tailored advice to achieve waste solutions that are practical and optimise sustainability.

Multi-Unit Development Division: our MUD team is supported by Green Gorilla's senior management who have over 200 years of combined waste industry experience to draw upon.

Fiona Lawrence, Recycling and Waste Consultant, leads the MUD team. Fiona has 11 years' experience within the waste industry. Fiona's role includes providing consultancy and Site Waste Management and Minimisation Plans (SWMMP) for new multi-unit developments and apartment buildings during early stage planning and consent stages. All consultancy and plans are carried out within the Auckland Council Waste Space Calculator guidelines, taking into account building code G15, and working to optimise ease of access for residents/commercial operators, and operational efficiency, while offering solutions to maximise diversion of waste from landfill.

### Relevant Site Characteristics:

Circa 58 residential units will be predominantly using communal waste facilities. Our initial assessment of the project and plans finds no overly complex or unconventional issues relative to waste services. Multiple waste areas have been included, further investigation will provide specific advice regarding enclosure sizes and access considerations.

Collection vehicle access will be required, our expectation from an initial review is that this should not be an issue; we will work with the Traffic Engineer consultant to ensure as such.

### Typical Scope of Consultancy and SWMMP:

- Waste Services/Capacity Requirement
- Property Details
- Waste Requirement
- Amenities
  - Designated Waste Areas
  - Equipment And Service To Be Provided
  - Specifications Of Bins & Enclosure
  - Noise Control
  - Waste Storage Area Hygiene & Aesthetics
  - Protection Of Equipment
